Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-4,8-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jagiela 5,566,995. Jagiela teaches a protective plate 44, for latchbolts 28,30, mounted to the door jamb and having a tang portion 46 which extends to protect the bolt. The plate is formed of steel, with countersunk holes 48, in the dimensions claimed (col. 3, lines 53-67 and col.4, lines 1-9). The tang portion extends in the horizontal direction for the extent of the latch bolt. Jagiela fails to teach a "T"-shaped plate wherein the tang portion is vertically dimensioned to only protect the latchbolt, but rather teaches a tang portion 46 which extends the entire vertical dimension of the plate. It would have been considered an obvious matter of design choice to modify the tang of Jagiela to only extend over the vertical extent of the latch bolt thereby forming a "T"-shape as desired.

3. Claims 5-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jagiela '995 in view of Sushan 4,130,311. Sushan teaches the use of five staggered countersunk screw holes, disposed in substantially two vertical columns (Fig. 5,7A), for mounting a latch protective plate to a doorjamb. It would have been obvious to one of

ordinary skill in the art to modify the number of mounting holes of the plate of Jagiela to have five staggered holes as taught by Sushan as an obvious matter of design choice in enhancing the security of the mounting.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Note the various bolt protecting plates of the cited prior art.
